## **DETAILED ACTION**

### ***Response to Amendment after Final***

1. Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.
2. Claims 11 and 12 have been cancelled in the amendment after final, dated 9/20/2007.

### ***Reasons for Allowance***

3. Claims 1-10 are allowed.

The following is an examiner's statement of reasons for allowance:

This application is for an OPTICAL DISK DRIVE.

- **Claim 1** specifies an optical disk drive, which requires:

*"a repetitive structure formed on edge portions of the plate member and extending along the direction crossing the disk tracks, the repetitive structure creating space having a high resistance to air flow and space having a low resistance to air flow, and rectifying the air flow generated during disk rotation above the upper disk surface to suppress turbulence and enhance laminar flow."*

- **Claim 10** specifies an optical disk drive, which requires:

*"a repetitive structure formed on opposite end portions of the opening and extending along the direction crossing disk tracks, the repetitive structure creating space having a high resistance to air flow and space having a low resistance to air flow, and rectifying the air flow generated during disk rotation above the upper disk surface to suppress turbulence and enhance laminar flow and having a wave shape as viewed in plan."*

The closest prior art of record, Mayumi, fails to teach, show or suggest, by either anticipating or rendering obvious, the invention as set forth in the claims of the instant

application. Furthermore, a search made does not detect the combined claimed elements as set forth in the pending claims. Additionally, the reasons for allowance of the claims over the prior art of record is believed to be readily clear, self evident and apparent from the claim language set forth in each of claims 1 and 10, when compared and contrasted with the prior art.

More particularly, the instant invention (as set forth in claims 1 and 10) provides for an optical disk drive having a repetitive structure formed on edge portions of the plate member and extending along the direction crossing the disk tracks, the repetitive structure creating space having a high resistance to air flow and space having a low resistance to air flow, and rectifying the air flow generated during disk rotation above the upper disk surface to suppress turbulence and enhance laminar flow and having a wave shape. None of the cited prior art of record disclose such a repetitive structure, as set forth in the manner, function and relationship relative to other claimed structures as prescribed by the independent claims.

Therefore, these features, in combination with other features of claims 1 and 10, are not anticipated by, nor made obvious over, the closest prior art of record of Mayumi.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
